

Innovative NVR
Large recording capacity

Grandstream's ONVIF compliant GVR3550 offers concurrent video recording and storage management for up to 24 720p HD cameras with a large storage capacity of up to 16TB and up to 4 hard drives using either RAID 0 or RAID 1 setting (hard drives not included in the base system package). The GVR3550 NVR can automatically discover, control, capture, record and play back high-resolution streaming video from Grandstream's entire family of megapixel IP Video Cameras and IP Video Encoders/Decoders. *Grandstream Networks.*

Emergency Notification App
Can send preset alerts

The Alertus activation app allows authorized dispatchers to send

preset alerts as well as view or cancel active alerts. Launching an alert via the app can also activate notification alerts through other, integrated products—including the Alert Beacon, Alert Desktop Notification, LED marquee display, text-to-speech interface for public address and giant outdoor speaker systems, fire alarm interface, VoIP phone alerting, and digital signage and cable television override. *Alertus Technologies.*

Access Control System Software
Features system lockdown and door status reporting

Security officials at schools, courts, government offices and other facilities which may be targets of crime or terrorism need the ability to lock or disable groups of doors with a single command in order to react to internal or external threats, and they also need to know the real-time status of controlled doors in their facility. These features work with either the Secura Key SK-ACPE-LE or the NOVA.16 (SK-MRCP) access control panels and Smart Readers. SK-

NET(tm) allows the designation of Override Cards, which can be issued to Campus Police, or First Responders (Police, Fire or EMTs.) Override Cards allow access at any reader, whether inactive or locked, providing authorities with the access required to capture or neutralize an assailant. *Secura Key.*

Aspirating Smoke Detector
For spaces up to 28,800 square feet

The FAAST XT 9400X can support a network of up to four pipes to protect as much as 28,800 square feet per detector, making it ideal for large open spaces, such as warehouses, atriums and cold storage units. Its pipes can run a total length of nearly 1,100 feet, with a maximum of 400 feet per single pipe. Long pipe runs enable the FAAST XT 9400X to be placed in a much more easily-accessed area for maintenance and testing, as opposed to common spot detectors. *Notifier.*

720-Degree Home Video Monitoring
Coverage from the floor to the ceiling

ALLIE is a dual-lens camera that gets placed atop a table or countertop and easily connects to the Wi-Fi network. Scanning 360-degrees horizontally and 360-degrees vertically, the camera—in conjunction with its integrated, proprietary software App—deliver an unprecedented remote-monitoring experience wherein the user can panoramically view from floor-to-ceiling and completely around the room—even zoom and freeze images—without any distortion. *IC Real Tech.*

Video Surveillance Servers
Continuously records 1,200 Mbps

Continuously record up to 1,200 Mbps of video for high concentration of HD cameras while supporting many simultaneous video to web/mobile clients with 1800 frames per second video. The Z-Series can simultaneously connect up to 500 remote clients and the optional dual 10 Gbps network interfaces for the fastest archiving or mass client performance. *Exacq Technologies.*

Past, Present & Future

Cellular: a sustainable wireless solution for connecting managers and users to access control systems*

- Available now – voice communication and programming over a cellular connection.
- Easy to install – no trenches to dig, no wiring to run.
- Easy setup – just activate the 4G LTE¹ cellular service.
- No telephone lines or ethernet cable to maintain.
- Turn remote locations into serviceable sites.
- Backwards compatible. Works on older systems as well as brand new systems.

Simplicity – and the future – at its best!

*The general counsel of the Federal Communications Commission predicts land lines will stop working within the next ten years, abandoned by companies like AT&T and Verizon in favor of wireless service in rural America or fiber (if you are lucky) in the cities.

¹Where available.
