Panic Form   USB Panic Button

Features

- **Software-Based:** Enable panic button features on any computer or workstation without the use of additional hardware

- **Integration:** Fully integrated with Alertus suite of emergency mass notification products; can be configured to work with existing systems or products

- **Customizable Panic Alerts:** Panic button alerts are preset for general emergencies and are fully customizable depending on your needs

- **Custom Event Triggers:** Ability to configure optional, custom event triggers based on business logic to enhance the default capabilities

Activation Methods

Panic Form
- Quickly send detailed alert information via pre-filled form to dispatchers and emergency responders

Desktop Panic Button
- Software-based panic button
- Notifications activated using scenario hotkey, task tray icons, and keyboard shortcuts

USB Panic Button
- Hardware extension of the software-based Desktop Activator
- Discreet under-the-counter button; mountable; single or multiple button options available
- Connects to PC/Mac running the Alertus Desktop Client or Activator
- Single button version can alert through locked computer screens, providing visual success indications; the Alertus Server automatically detects any disconnections (Windows)
- Fully supervised, connectivity monitored and reported in the software, including visual confirmation on the button

Specifications

Client Computer Requirements
